2. Develop Strong Problem-Solving Skills Practice multi-step problems integrating various topics. Learn to identify relevant information quickly.
3. Master Mathematical Communication Clearly state assumptions and reasoning. Use diagrams where appropriate and label them accurately. Write neat, organized solutions with proper notation.
4. Time Management Allocate time based on question marks. Tackle easier questions first to secure marks early. Leave time at the end to review and check answers.
5. Focus on Key Topics Prioritize practicing topics frequently tested in 2013. Review past papers and examiner reports for insights.

Sample Questions and Solutions from the 2013 Paper 4 Below are example questions inspired by the 2013 paper, along with strategies for solving them:

Example Question 1: Ratio and Proportion A bag contains red, blue, and green balls in the ratio 3:2:5. If there are 30 green balls, find the total number of balls in the bag. Solution Approach: The ratio of green balls to total parts is 5 parts to the total. Total parts = 5 (green) + 3 (red) + 2 (blue) = 10 parts. Since 5 parts correspond to 30 green balls, 1 part = $30 \div 5 = 6$ balls. Total number of balls = 10 parts $\times$ 6 = 60 balls. Answer: There are 60 balls in total.

Example Question 2: Algebraic Word Problem A rectangle has a length that is 3 times its width. The perimeter of the rectangle is 48 cm. Find the area of the rectangle. Solution Approach: Let width = w cm. Then length = $3w$ cm. Perimeter, $P = 2(\text{length} + \text{width}) = 48$. So, $2(3w + w) = 48$ $2(4w) = 48$ $8w = 48$ $w = 6$ cm. Length = $3 \times 6 = 18$ cm. Area = length $\times$ width = $18 \times 6 = 108$ cm². Answer: The area is 108 cm².
