Mechanics

Mechanics forms the backbone of physics and involves studying the motion of objects, forces, and energy.

Newton's Laws of Motion

First Law (Law of Inertia): An object remains at rest or in uniform motion unless acted upon by an external force.

Second Law: The force acting on an object is equal to the mass of the object multiplied by its acceleration ($F = ma$).

Third Law: For every action, there is an equal and opposite reaction.

Work, Energy, and Power

Work (W): Done when a force causes displacement ($W = F \times d \times \cos\theta$).

Kinetic Energy (KE): Energy possessed by a body due to its motion ($KE = \frac{1}{2}mv^2$).

Potential Energy (PE): Energy stored due to position (e.g., gravitational $PE = mgh$).

Power: Rate of doing work ($P = W / t$).

Law of Conservation of Energy

Energy cannot be created or destroyed, only transformed from one form to another.

Electromagnetism

Electromagnetism explores electric and magnetic fields, forces, and their interactions.

Electrostatics

Coulomb's Law: The force between two point charges is proportional to the product of their charges and inversely proportional to the square of the distance between them ($F = k \times q_1 \times q_2 / r^2$).

Electric Field: The region around a charge where it exerts force on other charges ($E = F / q$).

Electric Potential and Potential Difference: Work done in moving a charge in an electric field ($V = W / q$).

Magnetism

Magnetic Field: Region where magnetic forces are experienced.

Biot-Savart Law: Magnetic field due to a current element ($dB = \frac{\mu_0}{4\pi} \times (Idl \times r) / r^2$).

Electromagnetic Induction

Changing magnetic flux induces an emf (Faraday's Law).

Electromagnetic Waves

Generated by accelerating charges; travel at the speed of light. Include visible light, radio waves, X-rays, etc.

Characteristics: wavelength, frequency, speed.

Thermodynamics

Thermodynamics deals with heat, work, temperature, and the laws governing energy transfer.

First Law of Thermodynamics

Energy added to a system as heat equals the increase in internal energy plus work done by the system ($\Delta U = Q - W$).

Second Law of Thermodynamics

Entropy of an isolated system always increases; heat flows naturally from hot to cold.

Heat Engines and Efficiency

Devices convert heat into work; efficiency is the ratio of work output to heat input. Maximum efficiency is given by Carnot's theorem: $\eta = 1 - T_2 / T_1$.

Optics

Optics involves the study of light behavior, reflection, refraction, and optical instruments.

Reflection and Refraction

Laws of Reflection: Angle of incidence equals angle of reflection.

Snell's Law: $n_1 \sin\theta_1 = n_2 \sin\theta_2$; relates angles and refractive indices.

Optical Instruments

Uses lenses and mirrors for magnification and image formation. Examples: microscopes, telescopes, cameras.

Dispersion of Light

Splitting of white light into its constituent colors using a prism.

Modern Physics

Modern physics

introduces concepts beyond classical physics, including quantum mechanics and relativity. Photoelectric Effect Light incident on a metal surface ejects electrons if the frequency exceeds a threshold. Supports particle nature of light; explained by Einstein using quanta of energy ($E = hf$). Radioactivity Disintegration of unstable nuclei emitting alpha, beta, or gamma rays. Half-life: time taken for half the nuclei to decay. Nuclear Physics Involves fission, fusion, and applications in energy generation. Formulas and Constants to Remember Having a quick reference to important formulas helps in solving problems efficiently. Newton's Second Law: $F = ma$ Work done: $W = Fd \cos \theta$ Kinetic Energy: $KE = \frac{1}{2}mv^2$ Potential Energy (gravitational): $PE = mgh$ Electric Force: $F = k \frac{q_1q_2}{r^2}$ Magnetic Force (Lorentz Force): $F = qvB \sin \theta$ Power: $P = W / t$ Efficiency of engine: $\eta = (W / Q) \times 100\%$ Studying physics can sometimes be challenging, but these tips can help you master the subject: Understand the concepts before memorizing formulas.
