Question: Calculate the total resistance when resistors of 4Ω , 6Ω , and 8Ω are connected in series.

Answer: In a series connection, total resistance is the sum of individual resistances. Total Resistance, $R_{\text{total}} = R_1 + R_2 + R_3 = 4\Omega + 6\Omega + 8\Omega = 18\Omega$

This straightforward problem reinforces the concept of series circuits and basic arithmetic application. Similarly, more complex questions might involve circuit analysis, such as:

Question: Given a circuit with a 12V power supply and a resistor of 4Ω , what is the current flowing through the circuit?

Answer: Using Ohm's Law ($V=IR$), $I = V / R = 12V / 4\Omega = 3A$

Such questions help students develop problem-solving skills and understand the direct application of fundamental laws.
